DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims **1-16 and 21-24** are drawn to a RAM memory device having a command block with means for providing a row signal having active state in response to a write command, ...etc., and an array of cells with a selected row is opened for access in response to the active state of the row signal, etc., classified in class 365, subclass 189.01.
 - II. Claims **17-20** are drawn to a method of operating/writing a RAM device, classified in class 365, subclass 194.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case,
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and/or classification, restriction for examination purposes as indicated is proper.
